F1000 to showcase new and award-winning products at ALA Midwinter Meeting

F1000, the provider of services to support researchers, will be exhibiting at the ALA Midwinter Meeting and demonstrating its newest publication platform Wellcome Open Research and award-winning application F1000Workspace.

Launched in late 2016 using publishing services developed by F1000, Wellcome Open Research enables Wellcome grantees to make their research outputs available faster and in ways that support reproducibility and transparency.

Using a model of rapid publication followed by transparent invited peer review, the platform allows for publication of any type of findings that authors wish to publish – from more traditional narrative-based articles to incremental findings, methods, protocols, datasets and negative/null results.

In November 2016, the Charleston Advisor named the F1000Workspace application 'Best New End User Product' in its Readers' Choice Award. The application offers scientists an easy and intuitive reference manager with a collaborative writing tool for preparing manuscripts.

The application was developed in collaboration with academics to make it easier for researchers to discover relevant papers for their research, collect and organize references and PDFs, and share and collaborate with colleagues.

F1000 will be exhibiting at the ALA Midwinter meeting, with staff on-hand to answer any queries you may have about these and other services in the F1000 portfolio.

Notes to Editors

1. Wellcome Open Research provides all Wellcome researchers with a place to rapidly publish any results they think are worth sharing. All articles benefit from immediate publication, transparent refereeing and the inclusion of all source data.
